To PACKARD DISTRIBUTERS AND DEALERS

Subject SPRING COVER LUBRICANT

TO BE NOTED AND INITIALED BY

Gentlemen:

Investigation has shown that a benefit would be derived if a change were made in the lubricant used in our spring covers.

Those covers that are now being put on at the factory are coated with a lubricant consisting mainly of 90% vaseline and 10% graphite. We buy it from the Standard Oil Company of Indiana under their specification number 5655. You may purchase it for use on those covers installed in your service station from any Standard Oil Company requesting a lubricant similar to the above specification of the Indiana company.

If this lubricant is used we believe you will receive very satisfactory results.

Yours very truly,

PACKARD MOTOR CAR COMPANY
