Subject: VALVE TAPPET CLEARANCE -  
MODELS 2201-02-11-22-32

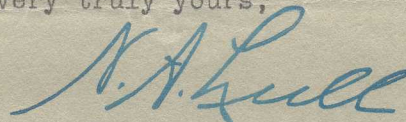

To reduce engine noise, the valve tappet clearance specification for 22nd Series Eight and Super Eight engines has been changed. The new tappet clearances for these engines are as follows:

Valve Tappet Clearance - Intake - .006"  
- Exhaust - .008"

Reducing the tappet clearance from the production setting substantially reduces the normal tappet noise without affecting the operating characteristics or performance of the engine.

Whenever tappets are adjusted on these models, the new specification should be followed.

Very truly yours,

N. A. Lull  
Service Technical Manager
