

Packard SERVICE TECHNICAL Bulletin

50T-17

April 11, 1950

To: ZONES

Subject: DISCONTINUATION DATE FOR CARBURETOR CHANGE-OVER (MODEL 2301)

Please refer to Service Technical Bulletin 50T-5, February 7, 1950 on the subject "WGD Carburetor Overchoking and Surging (Model 2301)."

The number of model 728S carburetors returned to the Factory to date indicates that complaints of overchoking and surging are not as numerous as was anticipated.

We are establishing May 15, 1950 as the closing date of this carburetor change-over program.

Zones should make sure that Dealers have no open complaints of surge or overchoking on vehicles equipped with the model 728S carburetor. It is also extremely important that all replaced 728S carburetors be returned to the Factory as soon as possible after this closing date.

Very truly yours,

J. A. Carr
