FRONT FENDER ASSEMBLIES MODELS 626-633-640-645

TO BE NOTED AND INITIALED BY

Gentlemen:

The construction of the front fender assemblies for models 626-633 640-645 has been changed from the welded on bracket to the removable bracket type. As soon as our present stock of the type with the welded on bracket is exhausted, you will receive only the removable bracket type.

The earlier cars of these models were equipped with fenders with the welded brackets, but these may be replaced when necessary with the later type by furnishing both the fender and the removable bracket. Later cars equipped with the removable bracket type may be replaced with the welded on bracket type by removing both the fender and the bracket.

For your information we are listing the piece numbers of the front fenders and the brackets to be used with these:

<u>Piece No.</u>	<u>Name</u>	<u>Model</u>	<u>Piece No. of Bracket</u>
159831	Front fender right - without well	626	166899
159850	" " " - with well	626	166899
159885	" " " - without well	633	167052
159887	" " " - with well	633	167052
159880	" " " - without well	640-645	167052
159883	" " " - with well	640-645	167052
159833	" " left - without well	626	166898
159852	" " " - with well	626	166898
158632	" " " - without well	633-640-645	167053
158629	" " " - with well	633-640-645	167053

The following detail parts are necessary for the attaching of the bracket to the fender for the later model:

<u>Piece No.</u>	<u>Name</u>	<u>Amt required</u>
7864	Bolt	2
5504	Lock washer	2
7005	Nut	2
3874	Plain washer	2

When ordering front fenders in the future, it will be necessary to watch this very carefully until such time as all front fenders are furnished with removable brackets and it would be well to carry a few brackets in stock for any replacements for the earlier cars originally equipped with the welded on brackets, but are now to be replaced with the removable bracket fender.

Very truly yours,

PACKARD MOTOR CAR COMPANY
